

An inquiry based approach to Shape and Space

This seminar capitalises on the natural opportunities for integration between Shape and Space in the primary maths curriculum and the wider STEM objectives. Participants will develop their spatial reasoning and visualisation skills through practical activities that embody an inquiry based learning approach. Participants will also explore innovative approaches to planning and assessing inquiry based learning lessons. Two teachers from a school will be allowed to attend and substitute cover is available. Participants can apply using www.pdst.ie/onlinebooking.
